4. Where, for the determination of the net quantity of any commodity contained in a package it is necessary to take samples from the place where the package is being filled such samples shall be selected from among the package which have already been filled, or in the alternatively, the requisite number of empty containers may be taken over and each of them shall be adequately marked for proper identification and the tare weight of each container shall be accurately noted and thereafter the marked containers shall be introduced at random in the packing process so that, after the packages are filled in may be possible to determine the net quantity

THE SIXTH SCHEDULE

(See Rule 19)

Determination of the Net Quantity of Commodities in Packages

Part-I - Equipment

1. Equipments required- (1) The Director, Controller or any Legal Metrology Officer authorized by or under the Act, to determine the net quantity; of commodity contained in any package, shall be provided by the concerned Government with adequate equipments and facilities to carry out his work to the required degree of accuracy in an Expedient and efficient manner.

(2) The equipments, referred to in sub-paragraph (1), shall ordinarily consist of working standard weights and balances, or any other weight or measure declared by the Director to be suitable for determining the net quantity contained in the concerned package.

(3) The Director, Controller or any Legal Metrology Officer shall, before determining the net quantity contained in any package, ensure that the working standards and other equipments are functioning properly.

2. Working standards to be ordinarily used.- (1) Ordinarily, working standards and other weights and measures, duly verified shall be used for determining the net quantities contained in packages and the errors, if any, in relation to the net quantity declared on the package.

Provided that, where it is necessary to use the weights and measures, owned or controlled by the manufacturer, packer or wholesale dealer as the case may be such weights and measures, shall be used unless the maximum

permissible error of such weights and measures is twenty per cent or less of the maximum error permitted in relation to the net quantity of the commodity contained in the packages.

(2) It shall be the duty of every manufacturer, packer or wholesale dealer to render such assistance the Director, Controller or any Legal Metrology Officer as the Director or other authorized person may require in order carrying out his duties expeditiously and efficiently.

(3) Where any weight, measure or other equipment, owned or controlled by the manufacturer, packer or wholesale dealer is used by the Director, Controller or any Legal Metrology Officer for the determination or the net quantity contained in any package, such weight, measure or other equipment shall not be released by the Director or other authorized person until his work is completed.

Part-II

Instructions with regard to the determination of quantity and error at manufacturer's or packer's premises.

3. (1) If empty tare packages are available, one such package shall be taken and tare package weight determined. If the tare package weight is equal to or less than three-tenths of the maximum permissible error for the concerned commodity of that quantity, it shall be assumed that the tare package weight so determined is valid for all the other packages in the sample, and the sample packages shall then be weighed for gross weight, and thereafter the net weight of commodity contained in each package shall be obtained by subtracting the tare package weight from the gross package weight. If the tare package weight so determined is more than three tenths of the maximum permissible error in relation to the commodity for that quantity, weight of four emptier tare packages shall be determined. If the difference between the maximum tare package weight and the minimum tare package weight of the five samples is equal to or less than four tenths of the maximum permissible error allowed for that commodity for that quantity, the tare weight of the package shall be taken as equal to the average of the five tare package weights. The gross weight of the package in the sample shall then be determined and the average tare package weight shall be subtracted from the gross package weight to obtain the net contents of the commodity in each package, in the sample. However, when the difference in the five individual tare weights of the packages exceeds the limit of four tenths of the maximum permissible error specified above, the procedure specified in sub-paragraph (4) or sub-paragraph (5), as the case may be, shall be adopted for determining the net quantity of individual packages.

(2) In the absence of empty tare packages, one package from the sample shall be opened and the net weight of the commodity and the tare weight of the package determined. If the tare weight of the package is equal to or less than three-tenth of the maximum permissible error for that concerned commodity of that quantity, it shall be assumed that the tare weight of one package so determined is valid for all the other packages in the sample, and the remaining packages shall then be weighed for gross weight, and thereafter the net weight of commodity contained in each package shall be obtained by subtracting the tare weight from the gross weight.

(3) If the tare weight of the package specified in sub-paragraph (2) is more than three-tenths of the maximum permissible error in relation to that commodity, four more packages in the samples shall be opened and the net weight of the commodity in each package as well as the tare weight of each package shall be determined. If the difference between the maximum tare weight and the minimum tare weight of five samples is equal to or less than four-tenths of the maximum permissible error for that commodity of that quantity, the tare weight of the package shall be taken as equal to the arithmetic mean of the five tare weights. The gross weight of the packages in the sample shall then be determined to the requisite accuracy and the average tare weight of the contained shall be subtracted from the gross weight to obtain the net contents of the commodity in each package in the sample.

(4) Where it is found on examining the first package, as described in sub-paragraph (2) that the tare weight of the container exceeds the limits specified in sub-paragraph (2) and sub-paragraph (3) and the determination of net contents, cannot be carried out without opening the remaining packages, or it is not, possible to use the procedure to use the procedure described in sub-paragraph (5) the size of the sample to be examined shall be restricted to that indicated in column (2) , in accordance with the batch indicated

in column(1) of Table of the Ninth Schedule and the determination of net quantity shall be carried out by opening all the packages in the sample.

(5) Where it is likely that the process of determination of the actual net quantity may be destructive and it is possible to feed empty package into the packing process without affecting the results, the following procedure shall be used:

(a) the number of empty packages, depending upon the size of the batch, in accordance with columns (1) and (2) of Table of the Fifth Schedule shall be selected;

(b) the empty package shall be marked suitably to identify them from the other packages;

(c) the weight of each empty package, with its other parts which are to be fitted on it after it is filled shall be determined and the weight suitably recorded on the empty package and also on the Form specified in the Seventh Schedule;

(d) the empty package shall then be filled by introducing them in a random manner in the packing process, and such introduction shall be adequately spread over the duration in accordance with which ;the size of the batch is determined;

(e) the marked packages shall be taken out after completion of the filling and sealing operations and each such filled package shall be weighed again to the requisite accuracy;

(f) the net quantity shall be obtained by deducting the tare weight determined in accordance with clause (c) from the gross weight.

(6) The Director, Controller or any Legal Metrology Officer shall enter results of this examination of gross weight, net weight and tare weight in the Form specified in the Eleventh Schedule along with such other observation as he may wish to make on the basis of his examination.

4. Determination of liquid contents by volume. -(1) If the specific gravity of the liquid commodity filled in packages remains sufficiently constant for a batch and it is possible to determine accurately its specific gravity the method of determination of net contents by weight, described in paragraph 3 may be used.

(2) If the method described in sub-paragraph (1) is not feasible the containers shall be opened and the contents of each package poured out carefully into the appropriate volume measure.

(3) The reading of the actual net volume of the commodity in every package shall be noted carefully and recorded in the Form specified in the Seventh Schedule.

5. Verification of length of commodities. -(1) The sample shall be selected in the manner specified in the Fifth Schedule.

(2) If it is not possible to measure the dimensions without opening the package, the package shall be opened.

(3) The length of the commodity shall be measured by means of a calibrated steel tape of suitable length.

(4) If the actual length of the commodity is so great that it is not possible to measure it with the tape measure and a suitable length measuring instrument is available on the premises, that instrument shall be use, after duly calibrating it by suitable means, with the steel tape serving ala working standard of length.

(5) The reading of the actual length of the commodity in every package shall be noted carefully and recorded in the Form specified in the Seventh Schedule.

6. Verification of commodities packed by number.- The Director, Controller or any Legal Metrology Officer shall take packages from the sample drawn by him in the manner specified in the Fifth Schedule and determine the extent of error, by actual counting in each such package and may, for that purpose open all packages.

7. Checking of other declarations.-(1) The declarations made on the package or on the label affixed thereto, shall be examined with a view to ascertaining whether such declarations conform to these rules and may be ensured either at the factory level or at the depot of the factory .

(2) The additional declarations made on the package or on the label affixed thereto in respect of item (g) and (h) of sub-rule (1) of rule 6 shall also be examined to ascertain whether they are adequate.

8. Determination of mean or average net quantity or net volume.-

After determining the individual values of net quantity or net volume or length or number of the commodity contained in the package, as per the procedure outlined in item numbers 3 to 6 of this Part, the mean or average value shall be calculated by summing up the individual values (xi) and dividing it by the number of sample packages (n) taken for testing, by the formula-

Average Net value (\bar{x}) = $\Sigma xi / n$.

9. Determination of Standard deviation of values.-

The standard deviation (σ) of individual values [xi] is determined by the formula

$$\sigma = \sqrt{\frac{1}{n-1} \sum (x_i - \bar{x})^2}$$
 ; where ,

xi = individual values of net quantity or net volume or length or number ,

x = average or mean value of net quantity or net volume or length or number.

10. Corrected average net quantity or net volume.-

The corrected average net quantity Xc is determined from the value of average net quantity [\bar{x}] by using the formula -

$X_c = \bar{x} + (\sigma \times C)$, where C is the correction factor.” .]

No. GST is included in MRP and is not to be charged over MRP.

4) Is it allowed to revise the MRP if there is any price change after coming into force of the GST law?

With coming into force of the GST law, in rare cases, where there is a need for revising the retail sale price above the already printed MRP on a pre-packaged commodity, Manufacturers/ Packers/ Importers can declare such revised MRP on their unsold stock through stickers/ online printing/ stamping, with the following conditions:

- i) Difference cannot exceed the net price increase on account of incidence of tax after factoring in and taking into consideration extra availability of input tax credit under GST (including deemed credit available to traders under proviso to subsection (3) of section 140 of the CGST Act,2017);
- ii) Original MRP shall continue to be displayed and the revised MRP shall not overwrite on it;
- iii)Manufactures/ Packers/ Importers have to issue two advertisements in one or more newspapers and intimate the Director Legal Metrology and Controllers of Legal Metrology in the states.

5) How new MRP will be calculated for the purposes of labeling?

New MRP of unsold stock manufacture/ packed/ imported prior to 1st July 2017 should not be calculated mechanically but after factoring in and taking into consideration extra availability of input tax credit under GST (including deemed credit available to traders under provision to subsection (3) of section 140 of the CGST Act,2017).

6) How upward revision of prices can be displayed?
